

# A clean energy future crafted in Queensland.

CleanCo is a low-emission energy retailer, generator and developer backed by the Queensland Government.

We are trusted to lead Queensland's energy transition by supplying large-scale, low-emission energy to our customers and their communities, helping them to thrive in a net zero future. We do this safely and sustainably through our no-coal portfolio and reliable firming asset base.

We are proud to invest in and advocate for Queensland's energy future, engaging with our customers and communities to deliver better energy solutions, decarbonising industries and supporting regional economic development. As a Queensland Government-Owned Corporation, we reinvest our profits back into the state, further supporting the energy transition.

**We are working to create a better energy future for our customers, communities and Queensland.**

## Central Queensland

Central Queensland - the state's industrial powerhouse - needs reliable, clean energy to drive future economic activity and industry development in the region.

CleanCo is partnering with various developers to progress a portfolio of renewable energy projects and clean energy storage solutions that will deliver good social, economic and environmental outcomes for host communities and help create a cleaner energy future for Central Queensland.

Beyond delivering critical energy, developing a portfolio of renewable energy and storage projects in Central Queensland presents a unique opportunity to establish local supply chains, create a pipeline of jobs and training for the region, decarbonise Queensland's energy intensive industries and support regional economic development.

CleanCo will use the energy generated by these projects to provide our large commercial and industrial customers with tailored clean energy solutions to help them reduce their carbon footprint.

## Commitment to community

The opportunities presented by the transition to a cleaner energy future are far-reaching and will be long-lasting.

CleanCo is committed to working with communities to carve a path through the energy transition that fosters understanding and inclusivity, creating a sustainable and prosperous future for all.

We seek to meaningfully contribute to vibrant, sustainable, resilient communities by engaging in impactful, long-term initiatives and partnerships.

We support economic growth by fostering local supply chains and offering training and employment opportunities.

## Sustainability at our core

We recognise our responsibility to operate our assets with minimal impact on their surrounding natural environments. We strive to demonstrate consistently best practice in the way we interact with these environments and our host communities.

CleanCo's approach to sustainability is guided by a framework which comprises six priority areas:

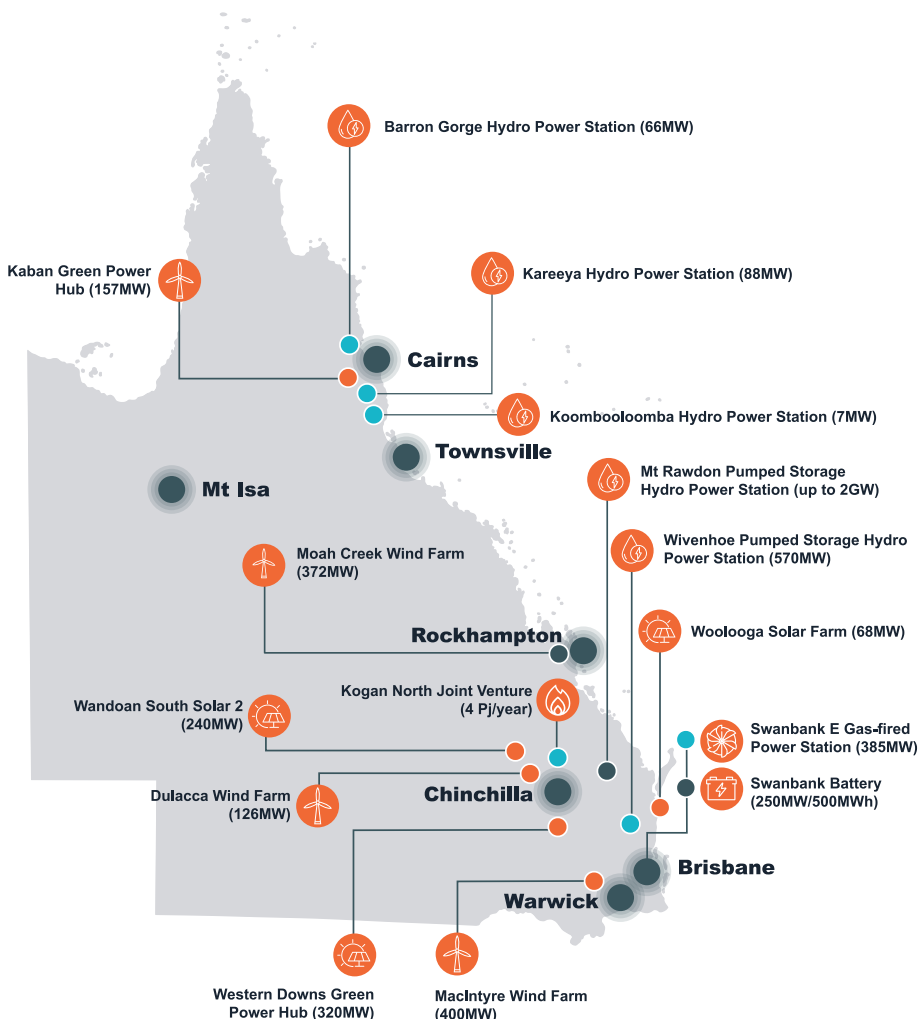

- Land and environment
- Carbon
- Community
- Ethical sourcing
- Equity, inclusion, diversity and belonging
- Integrity and governance.

## Our portfolio

**CleanCo is the custodian of some of Queensland's most flexible lower-emission energy generators.**

These valuable assets provide the foundation on which we are building our portfolio of renewable energy generation and storage facilities, meeting the growing energy needs of our current and future customers.

For our Central Queensland projects, this includes opportunities like repurposing infrastructure for long-duration storage at Mt Rawdon and delivering new renewable generation through the Moah Creek Wind Farm.
